specification of the fitness value

Enter the fitness value:

c_k

Do you want to minimise or maximise the fitness value? [min] or [max]

max

Enter P = timepoint A = average (between 2 timepoints) R = changing rate (between 2 timepoints)

P

Enter timepoint one

370

Enter timepoint two (just for average and changing rate)

0

Do you want to have addtional optimization features

y

OK   Cancel
